Technology from the ground up

Technology Solutions
for
AGRICULTURE

Your Farm in Your Pocket

Greenstalk®

HERE'S HOW IT WORKS

Greenstalk Technology helps farmers run smarter, more efficient farms. We make technology simple, so you can focus on farming, not learning complicated systems.

We listen to your needs and create real-world, interoperable, holistic solutions tailored to your farm. All our technology and products are proudly designed, developed, and manufactured in the UK, ensuring exceptional quality and reliability.

Our technology and products are always evolving, so please talk to us about your requirements. We also work with third-party companies to link their products to our platform, and if a product doesn't exist, we can design and develop it for you.

Greenstalk helps reduce travel time and wasted hours, and it works on any modern device, including mobile phones, tablets, and PCs.

Our Approach

Every farm is different. Our solutions are designed around your priorities and challenges. Whether it's:

Making old equipment smarter

Connecting different systems together

Creating a dashboard that shows everything at a glance

... **technology that works for you.**

Core Platform

The Greenstalk platform brings all your farm systems together. This allows you to:

- See what's happening across crops, livestock, machinery, energy use, and security
- Create dashboards that show only what you need
- Connect third-party devices and old equipment so everything works together
- Expand the system gradually over time
- Control pumps, lights, gates, bird-scarers, and other equipment remotely
- Let multiple users and contractors log in safely and see only what they need, while the estate office can view all assets
- Use UK-designed and manufactured technology for reliability and support
- Access your data on any modern device, reducing travel and saving time

Current Projects:

Greenstalk systems are live and working across the farm. Current projects include:

WEIGHBRIDGE INTEGRATION

- smarter weighbridges linked to your office

CROP TRACKING

- monitoring crops from planting to harvest

VEHICLE AND SITE ACCESS

- automatic number plate recognition for better security and logistics

TICKETING SYSTEMS

- digital records for compliance

POWER AND ENERGY MONITORING

- track electricity, heating oil, and fuel across the estate, with alerts for unusual use

GEO-FENCING FOR SECURITY

- protect fuel tanks, storage yards, and other high-value areas

LINKED AND INTERACTIVE SYSTEMS

- all devices talk to each other, letting you expand and automate gradually

ACTIVE ASSET CONTROL

- see what's happening and control equipment remotely

SMART BIRD-SCARER

- fully integrated, uses less gas and smaller batteries, reducing running costs. Once deployed, it can be expanded with **crop height sensors**, **weather stations**, and **soil monitoring**.

These projects are successfully deployed showing real results on our client's farms.

Contact us to discover all we can do.

Greenstalk® Dashboard

Your Complete Picture

Our dashboard shows your whole estate at a glance:

- See crops, livestock, machinery, energy, and security in real-time
- Custom dashboards for each user
- Bring in data from other devices and systems
- Mobile access for field monitoring and control
- Expand the system gradually while keeping everything connected
- Multi-user access. Contractors see only what they need, estate office sees everything
- Control assets remotely, pumps, gates, lights, bird-scarers, and more
- Works on any modern device — mobile phones, tablets, or PCs, helping you save time and reduce travel
- Built in the UK for reliability

Why Greenstalk®?

- We make technology simple and easy to understand
- We listen to your needs and deliver real-world solutions
- We make old equipment smarter
- We support third-party devices and systems
- If a product doesn't exist, we design and develop it for you
- Our solutions are live and operational
- Systems are linked and interactive, allowing gradual expansion
- Remote control of assets as well as monitoring
- UK-designed and manufactured, ensuring quality and support
- Trusted by Frederick Hiam Foods and other leading farms

Applications – Today and Tomorrow:

CROPS AND LAND

- Grain storage sensors (temperature, humidity, fan control)
- Soil moisture and nutrient monitoring
- Irrigation pumps and water monitoring
- Crop condition, yield, and growth tracking
- Weather monitoring and integration
- Field stations

ANIMALS

- GPS ear tags for location and welfare monitoring
- Milk yield and health tracking
- Drinking water monitoring
- Lone worker safety

MACHINERY AND ASSETS

- Tractor and machinery monitoring
- Trailer and vehicle tracking
- Fuel use tracking
- GPS-enabled field note-taking

ENERGY AND BUILDINGS

- Electricity and heating monitoring
- Lighting control
- Storage silo monitoring
- Chemical stock control

SECURITY

- Bird-scarers with new smart design – remote control, GPS, tamper alerts, video, uses less gas, and smaller batteries
- Door and gate monitoring
- CCTV and webcam monitoring
- Entry/exit monitoring
- Geo-fenced areas for high-value assets
- Expandable systems – after deploying the bird-scarer, you can add crop, weather, and soil sensors to monitor the field more comprehensively

How can we help you?

Our product design, electronics and control systems knowledge will help you find solutions that work for your environment, providing efficiency, cost savings and peace of mind.
